DEVELOP A WEB APPLICATION USING NODE-RED

Team ID	PNT2022TMID14122
Project Name	Project-IoT Based Safety Gadget For
	Child Safety Monitoring &
	Notification

STEPS:

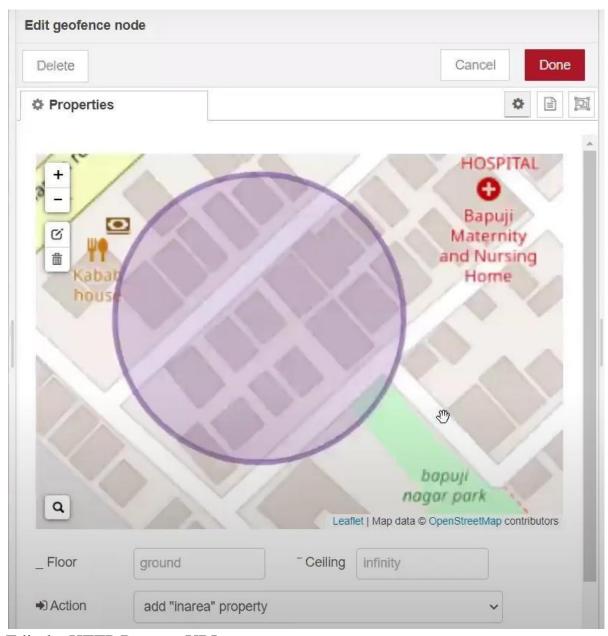

• Open Node-RED project

• Add code to get child location in python

```
import json
import wiotp.sdk.device
import time
myConfig = {
     "identity": {
    "orgId": "hj5fmy",
    "typeId": "NodeMCU",
           "deviceId": "12345"
      "auth": {
           "token": "12345678"
client = wiotp.sdk.device.DeviceClient(config=myConfig, logHandlers=None)
client.connect()
While True:
          name= "Smartbridge"
           #in area location
           latitude= 17.4225176
           longitude= 78.5458842
           #out area location
           #latitude= 17.4219272
           #longitude= 78.5488783
          myData={'name': name, 'lat':latitude,'lon':longitude}
client.publishEvent(eventId="status", msgFormat="json", data=myData, qos=0, onPublish=None)
print("Data published to IBM IoT platfrom: ",myData)
time_sloon(5)
          time.sleep(5)
client.disconnect()
```

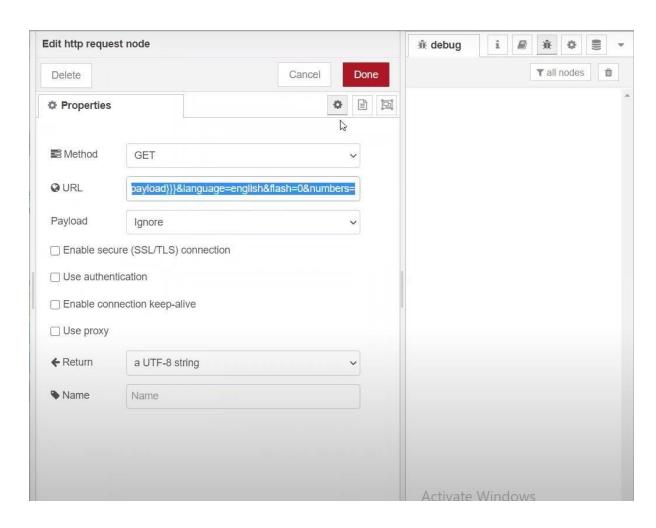

Create a Geofence

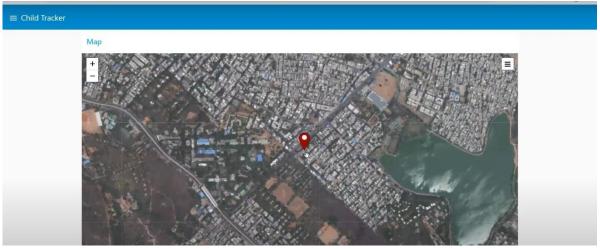

Edit the HTTP Request URL

•

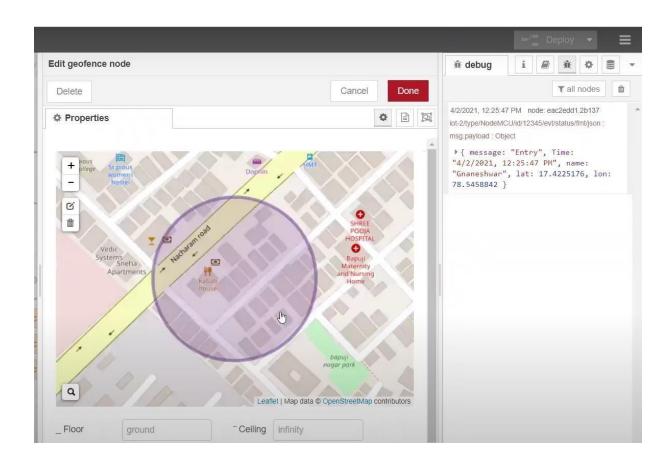

•

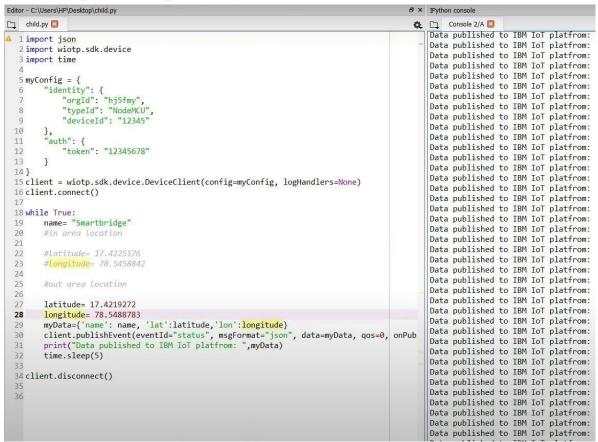

• Locate the child

Create the geofence node

Python script sends request to IBM Cloud

After running the script, the web UI shows "Child is not in the particular area"
